

AI + Cybersecurity Industry-Level Project Ideas

1. AI-Powered Zero-Day Attack Detector (Behavior-based anomaly detection using logs, traffic, and user activity)
2. AI Red Team Agent (Autonomous system that simulates cyberattacks and finds vulnerabilities)
3. Malware DNA Analyzer (Deep learning on binary/code structure to classify malware)
4. AI-Based Phishing Detection (Multi-modal detection using text, URLs, and visual analysis)
5. Insider Threat Detection System (Detect abnormal employee behavior patterns)
6. AI-Driven Network Traffic Intelligence Engine (Real-time traffic analysis and anomaly detection)
7. LLM Security Guard (Protect AI systems from prompt injection and data leakage)
8. Deepfake Detection System (Detect fake videos, audio, and images)
9. Cyber Threat Intelligence AI (Analyze hacker forums, leaks, and predict threats)
10. Self-Healing Systems (Automatically detect and respond to cyberattacks)
