

Top 10 Original AI Research-Level Ideas

1. AI That Creates Its Own Internal Language – emergent communication between models.
2. Time as a Learnable Force – treat time as a trainable parameter.
3. Artificial Life Simulator – neural networks as evolving organisms.
4. Memory Compression Engine – compress long sequences into minimal states.
5. AI That Breaks Its Own Architecture – self-modifying neural networks.
6. Reality Simulator – multiple agents perceiving different realities.
7. Thought Reconstruction Engine – reconstruct hidden internal representations.
8. Neural Physics Engine – discover physical laws from data.
9. Cross-Model Translator – translate between Transformer, Mamba, CNN.
10. 'Praba' Hypothesis Simulator – simulate your own fundamental particle theory.
