

AI Startup Projects Blueprint

1. AI Supply Chain Optimizer

Outcome

- Accurate demand prediction
- Optimized delivery routes
- Reduced logistics cost
- Better inventory management

Requirements

- Sales and logistics dataset
- Time-series forecasting models
- Optimization algorithms (RL + OR)
- Backend (FastAPI) and dashboard

Core Components

- Demand prediction engine
- Routing optimization
- Real-time adjustment system
- Business dashboard

2. AI Codebase Understanding Engine

Outcome

- Instant understanding of large codebases
- Faster debugging
- Improved developer productivity
- Automated documentation

Requirements

- Code repositories (GitHub)
- Code parsing tools (Tree-sitter)
- Embedding models (CodeBERT)
- LLM for reasoning
- Vector database

Core Components

- Code parser and graph builder
- Embedding + retrieval system
- LLM reasoning engine
- Memory layer
